

ASBESTOS INFORMATION

Federal regulations require building owners to provide information detailing the presence of asbestos-containing materials to building occupants or tenants. In order to comply with federal regulations and to help educate tenants about the sources and guidelines concerning asbestos building materials, a copy of the University of Kentucky Environmental Management fact sheet [Asbestos in Building Materials](#) is enclosed. Please read it and keep it for later use. The materials listed on the Fact Sheet should not be removed, damaged, or disturbed by anyone other than authorized University personnel. Prior to any activity that would disturb asbestos-containing materials (such as renovation, maintenance, or demolition), asbestos testing will be performed by the University and, if asbestos were present, the material would be removed by trained, certified asbestos workers.

The University has determined that the following materials are known to contain asbestos in Graduate and Family Housing buildings located in these apartment complexes: 625 S. Limestone (LTS), 635 Maxwellton (LTS), Shawneetown, Commonwealth Village, and Patterson Hall:

- Thermal system insulation (insulation on tanks, pipes, boilers)
- Floor tile and adhesive
- Ceiling panels in walkway overhang and mechanical rooms (Shawneetown only)
- Window putty

Since the University does not know specific sources of asbestos containing materials in University Apartment Housing buildings located at Greg Page Stadium View please refer to the University of Kentucky Environmental Management fact sheet [Asbestos in Building Materials](#).

Please remember that the mere presence of asbestos in building materials does not constitute a hazard. Asbestos only presents a potential health hazard when fibers become airborne and inhaled. Therefore, as long as installed asbestos material remains undamaged and undisturbed, they present no hazard and can be successfully managed in place.

If you have any questions or would like additional information regarding asbestos, please contact:
